

Maximize the impact of sustainability data at PoS

Three easy steps to help your travel programme benefit from sustainability data at the point of search in Concur Travel:

1. Sort SAP Concur search results from lowest to highest emissions

Thrust Carbon calculations are specific to the exact travel your employees takes e.g. the model of plane they fly on.

Sort results by emissions to choose the lowest-emitting option within policy.

2. Check the accuracy of your post trip emission reporting

Travelers will start choosing lower-emitting trips now they can see accurate sustainability data at the Point of Search.

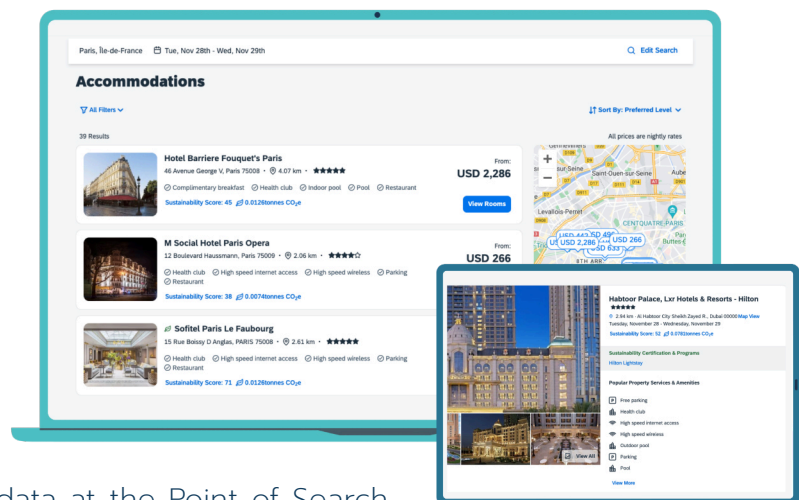

Ensure the calculation you use for post-trip emission reporting is as accurate as the Thrust Carbon calculation powering SAP Concur's Evolution of Travel.

Reduce emissions not visible with average-based methodologies like Defra.

3. Create consistency throughout the traveler experience

Drive behavioral change by keeping your sustainability messaging consistent.

Show your travelers the same emission data pre trip, at booking, and post trip.

48,000 customers and **66 million travelers** can now make sustainability driven travel booking decisions, at the point of search with Thrust Carbon & SAP Concur.
